

Full Rotation Heavy-Lift Crane

This is an ocean engineering vessel with full rotation capabilities. It can lift extremely heavy loads with a stand-alone lift.

Overview

Heavy-Lift Crane Overview

This heavy-lift crane is engineered for demanding construction and industrial environments requiring significant lifting capacity. Featuring a full-rotation design and a robust lattice boom structure, it provides exceptional maneuverability and stability, even in confined spaces. Equipped with advanced control systems, the crane ensures precise load management and operational safety for complex project requirements.

Performance

Rated Lifting Capacity

3500 T

Maximum Load

Technical Features

Rotation

Full Rotation

Boom Design

Lattice Boom

Hoisting System

Multiple hoisting cables

Safety & Control

Control System

Advanced precision load management system

Applications

Suitable Applications

Construction, Industrial, Confined Spaces
