

Full Suspension Mountain Bike for Downhill Riding

This full-suspension mountain bike is designed for downhill and freeride riding. It features a robust frame construction with a coil-over rear shock and a long-travel front suspension fork.

Overview

Built for Demanding Downhill Performance

This full-suspension mountain bike is engineered specifically for aggressive downhill and freeride riding. Featuring a robust 6061-T6 aluminum frame and high-performance suspension components, it is designed to handle steep descents and technical terrain with confidence. With reliable hydraulic disc brakes and a versatile drivetrain, this bike provides the control and durability professional riders require.
