

Full Suspension Mountain Bike with Aluminum Frame

This full-suspension mountain bike is designed for aggressive trail riding and downhill performance. It features a hydroformed aluminum frame with a full floater suspension system providing 170mm of travel.

Product Overview

Built for Challenging Terrain

This full-suspension mountain bike is engineered for aggressive trail riding and high-performance downhill applications. Featuring a robust hydroformed aluminum frame and a specialized suspension system, it provides 170mm of travel to handle demanding lines and transitions. Designed for durability and responsiveness, this bike allows riders to test their limits on the most challenging paths.

Technical Specifications

Suspension Travel

170 mm

Travel Distance

Frame Material	Hydroformed Aluminum
Suspension System	Full Floater System

Components
