

Galvanized Bow Shackle with Pin

This bow shackle, also known as an anchor shackle, is a U-shaped metal piece fastened with a pin or bolt. The bow shackle's larger curved section accommodates wider slings or multiple connection points.

Product Overview

Versatile Rigging Solution

The Galvanized Bow Shackle with Pin is an essential component for rigging, lifting, and towing applications. Featuring a U-shaped design with a larger bow, it is specifically engineered to accommodate wider slings or multiple connection points simultaneously. The galvanized finish provides excellent corrosion resistance, ensuring durability and reliability in demanding environments.

Technical Specifications

Surface Treatment

Galvanized

Key Features

- U-shaped bow design
- Secure pin/bolt closure
- Corrosion-resistant finish
- High-capacity load handling

Shackle Type

Bow Shackle (Anchor Shackle)

Applications

Primary Applications

Rigging, Lifting, Towing, Marine Construction
