

Galvanized Closed Body Turnbuckles

These heavy-duty turnbuckles are designed for adjusting tension in rigging. Their closed body enhances durability and safety.

Overview

Heavy-Duty Rigging Solutions

These galvanized closed body turnbuckles are engineered for precise tension and length adjustment in demanding rigging systems. Built from high-strength steel and finished with a protective galvanized coating, they offer superior corrosion resistance and durability. The closed body design ensures enhanced safety and reliability, making them an ideal choice for construction, marine, and industrial applications.

Technical Specifications

Material Construction	High-strength steel
Surface Finish	Galvanized
Design Features	Closed Body, Corrosion Resistant, Heavy-Duty

Applications

Suitable Industries

- Construction
- Marine
- Industrial Rigging

Primary Function

Tension Adjustment • Length Adjustment
