

Galvanized Heavy Duty Wire Rope Thimble

This heavy-duty thimble is designed for wire rope or cable applications. It provides a wear-resistant surface to protect the cable from abrasion and deformation at the loop or termination point.

Product Overview

Heavy-Duty Protection for Wire Rope

This heavy-duty galvanized thimble is engineered to provide a wear-resistant surface for wire rope and cable applications. By preventing abrasion and deformation at the loop or termination point, it ensures the longevity and integrity of your rigging systems. Constructed from high-quality steel and hot-dip galvanized, this component offers superior corrosion resistance for demanding lifting and industrial environments.

Technical Specifications

Material	High-quality steel
Finish	Hot-dip galvanized
Applications	Rigging, Lifting, Wire Rope Terminations, Cable Protection

Key Features

Performance Benefits

- Prevents cable abrasion
- Protects against loop deformation
- Corrosion-resistant coating
- Designed for heavy-duty use
