

Galvanized Steel Bolt and Nut Set

Galvanized steel bolts and nuts are designed for high strength and corrosion resistance. These fasteners are used in assembling and securing electrical transmission and distribution infrastructure.

Product Overview

Professional Grade Fasteners

These galvanized steel bolt and nut sets are engineered specifically for the installation and fixation of electrical equipment on overhead lines. Constructed from heated galvanized steel, they offer robust performance and essential corrosion resistance for demanding outdoor infrastructure environments. This assembly provides a reliable solution for securing electrical transmission and distribution components.

Technical Specifications

Available Diameters

- 12
- 14
- 16
- 18
- 20

Material	Heated Galvanized Steel
----------	-------------------------

Length Range	100 - 500 mm
--------------	--------------

Application Details

Primary Applications	Overhead Lines, Electrical Equipment Installation, Power Transmission, Distribution Infrastructure
----------------------	--
