Product Overview

Professional Electrical Protection

The BS31-1940 galvanized steel electrical conduit is a robust tubing system designed for the protection and routing of electrical wiring. Manufactured to meet British Standard BS 31 Class 3, this conduit provides heavy-duty mechanical protection for cables in demanding environments. It is ideal for installations following UK wiring regulations, ensuring a secure and durable electrical infrastructure.

Technical Standards

Compliance Standard

BS 31-1940 • Class 3

Classification

Class 3 Heavy Protection

Large Diameter

Construction

Material

Galvanized Steel

Key Features

Precise Threading, Durable Construction, Mechanical Protection, Corrosion Resistant

Application

Installation and Use

This conduit is specifically engineered for the routing of electrical conductors where robust mechanical protection is required. Installation should be performed in accordance with UK BS 31-1940 wiring regulations to ensure safety and system integrity.
