Overview

BS4568 Galvanized Steel Conduit

This BS4568-1970 electrical conduit is a high-quality tubing system designed for the robust protection and routing of electrical wiring. Manufactured to meet UK BS 4568 Part 1 1970 regulations, it provides essential mechanical protection for cables in industrial and commercial environments. The system features threaded ends for secure connections and a smooth interior surface to facilitate easy wire pulling during installation.

Technical Standards

Compliance Standard

BS4568-1970 • BS 4568 Part 1

Physical Properties

Surface Finish

- Galvanized exterior for corrosion resistance
- Smooth internal surface for easy cable pulling

Material

Galvanized Steel

Installation Features

Connection Type

Threaded ends with coupling

Protection Features

Mechanical Protection, Wiring Pathway, End Cap Protection

Product Options

Available Variants

- Various lengths available
- Multiple diameter options
