

Galvanized Steel Electrical Metallic Tubing (EMT) Conduit

This galvanized steel electrical metallic tubing (EMT) conduit protects electrical wires. It is suitable for concealed and exposed wiring applications.

Overview

Galvanized Steel Electrical Metallic Tubing (EMT) Conduit

Electrical Metallic Tubing (EMT), often referred to as thin-wall conduit, is a high-quality galvanized steel raceway engineered for the secure protection and routing of electrical wiring. It is lightweight, making it easy to bend and cut on-site, while providing robust shielding against electromagnetic and radio frequency interference. This conduit is an ideal solution for both concealed and exposed wiring applications in commercial and industrial environments.

Technical Specifications

Standard Compliance

ANSI C80.3-1983

Available Diameters

- 1/2 inch
- 3/4 inch
- 1 inch
- 1-1/4 inch
- 1-1/2 inch
- 2 inch
- 2-1/2 inch
- 3 inch
- 4 inch

Material

Galvanized Steel

Installation & Usage

Compatible Fittings

Compression, Set-screw

Grounding

Yes
