

Galvanized Steel Grip Clamp Coupling

This grip clamp coupling is constructed from galvanized steel. It meets EN877 standards and is designed for securely fastening pipes and tubes.

Product Overview

High-Performance Grip Clamp Coupling

The Galvanized Steel Grip Clamp Coupling is engineered for secure and reliable fastening of pipes and tubes in demanding industrial environments. Featuring a specialized toothed inner surface, this clamp provides superior holding power and stability. Its robust metal construction ensures long-lasting durability, while the dual-screw tightening mechanism allows for precise and firm installation across various pipe connection applications.

Technical Specifications

Material	Galvanized Steel
Fastening Method	Dual-screw tightening
Grip Design	Toothed inner surface, High-friction grip, Robust construction

Application

Primary Applications

- Pipe fastening
- Tube connection
- Industrial piping systems
- Structural reinforcement
