Product Overview

Professional Guy Grip Dead Ends

These galvanized steel guy grip dead ends are engineered for the secure termination of stay wires and guy strands in distribution and transmission construction. Featuring a specialized helical design, these grips provide superior holding power by distributing stress evenly along the wire, which helps prevent damage and ensures long-term structural integrity. Built for durability in diverse environmental conditions, they offer a reliable, cost-effective, and easy-to-install solution for anchoring overhead lines.

Technical Specifications

Key Features

- Helical design for even stress distribution
- High tensile strength
- Corrosion-resistant galvanized coating
- Easy installation process
- Reusable design

Material	Galvanized Steel
Primary Applications	Distribution Lines, Transmission Lines, Stay Wire Termination, Overhead Anchoring
