

Galvanized Steel Hook and Eye Turnbuckle

This electrically galvanized turnbuckle is designed for adjusting tension and length in rigging systems. It features a hook on one end and an eye on the other, allowing for versatile connections.

Product Overview

Versatile Rigging Solution

This electrically galvanized commercial turnbuckle is engineered for precise tension and length adjustment in diverse rigging systems. Featuring a combination of a hook on one end and an eye on the other, it offers flexible connection options for various setups. The durable galvanized coating ensures reliable corrosion resistance, making this component suitable for demanding applications in construction, marine, and agricultural environments.

Technical Specifications

Functionality

- Tension adjustment
- Length modification
- Rigging system assembly

Surface Treatment	Electrically Galvanized
-------------------	-------------------------

End Configurations	Hook, Eye
--------------------	-----------

Application Areas

Recommended Industries

Construction • Marine • Agriculture
