

# Galvanized Steel Roof Panel Roll Forming Machine

The Galvanized Steel Roof Panel Roll Forming Machine efficiently produces high-quality galvanized roof panels. It utilizes advanced roll forming technology to precisely shape metal sheets into the desired roof panel profiles.

## Product Overview

### High-Efficiency Roll Forming Solution

This galvanized steel roof panel roll forming machine is engineered for the precise production of high-quality roofing and wall panels. Featuring robust construction for industrial stability, it utilizes advanced roll forming technology to deliver consistent results for various steel gauges. The system is designed to enhance production capacity while maintaining strict manufacturing standards for construction applications.

## Performance Metrics

### Production Speed

**10 m/min**

Speed

## Technical Specifications

|                    |                  |
|--------------------|------------------|
| Power Rating       | 5.5 kw           |
| Voltage            | 380V, 3 phase    |
| Dimensions (L*W*H) | 6600*1400*1300mm |

## Machine Details

|              |  |
|--------------|--|
| Condition    | New  |
| Machine Type | Tile Forming Machine                       |
| Primary Use  | Roof Panel, Wall Panel, Steel Construction |

## Compliance and Support

|                     |   |
|---------------------|---|
| Certifications      | BV  |
| Warranty            | 1 year  |
| After-sales Support | Engineers available to service machinery overseas |
