

Galvanized Steel Tubular Thimble with Gusset

This tubular thimble is made from galvanized steel and includes a gusset. It is designed to protect wire rope or cable from wear and deformation at the termination point.

Product Overview

Professional Rigging Solutions

This galvanized steel tubular thimble with gusset is engineered to protect wire rope and cable from critical wear and deformation at termination points. The robust tubular construction offers enhanced structural integrity, while the integrated gusset prevents distortion under heavy load conditions. It provides a secure and reliable connection for a wide variety of professional rigging and lifting applications.

Technical Specifications

Material Finish

Galvanized Steel

Key Features

- Tubular construction for increased strength
- Reinforced with integrated gusset
- Prevents cable wear and deformation
- Suitable for heavy-duty lifting and rigging

Application Compatibility

Wire Rope, Cable Protection, Lifting, Rigging
