

Garden Hose Y-Splitter with Dual Control Valves

This Y-splitter allows a single water source to be split into two separate hoses. Each outlet has its own independently controlled valve with a quick connection and rubber O-ring for a watertight seal.

Product Overview

Dual-Control Garden Hose Y-Splitter

This durable garden hose Y-splitter is designed to maximize utility by allowing you to connect two separate hoses to a single water source. Featuring independent control valves with ergonomic blue handles, it enables precise flow management for each outlet. The unit is built with high-quality plastic and includes integrated rubber O-rings to ensure a reliable, watertight seal for all your irrigation or cleaning needs.

Technical Specifications
