

# Gardening Tool Brake Gear

This brake gear is designed for use in gardening tools to provide braking functionality. It features a spring-loaded mechanism, friction pad, and mounting holes.

## Product Overview

### Reliable Braking for Gardening Equipment

The 1P70 brake gear is a specialized component designed for the braking mechanisms of professional gardening tools. Built with a sturdy metal construction, it incorporates a spring-loaded mechanism and a high-friction pad for precise and controlled stopping power. Its design includes integrated mounting holes for stable installation and a lever arm for efficient actuation.

## Technical Specifications

Model Identifier	1P70
Material	Metal
Mechanism	Spring-loaded
Braking Element	Friction pad

## Design & Installation

### Key Benefits

- Controlled stopping mechanism
- Secure attachment via mounting holes
- Durable metal construction for long service life

Installation Features	Mounting Holes, Lever Arm Actuation
-----------------------	-------------------------------------

## Application

Primary Application	Gardening Tools
