Product Overview

High-Performance Gas Oven Igniter

This hot surface igniter is designed for reliable and efficient ignition in gas ovens and stoves. Engineered with high-quality materials including 95% alumina ceramic, it offers excellent heat resistance and durability. The unit features a robust design with integrated wiring, ensuring consistent performance for professional appliance maintenance and repair.

Technical Specifications

Maximum Temperature Resistance	260
Maximum Voltage	25 kV

Materials & Construction

Cable Insulation Materials

- Polytetrafluoroethylene (PTFE)
- Braided wire
- Silica gel wire

Head Material Composition	95% Alumina ceramic with surface glass finish
Cable Appearance	White, Transparent
