

Gas Power Generator

This gas generator is engineered for efficient power generation across various applications. It features a durable construction, integrated cooling systems, and a control panel for monitoring and operation.

Overview

Reliable Gas Power Generation

These gas generators are engineered for robust power generation in demanding environments. Featuring a durable orange enclosure and an integrated cooling system, they are built to withstand continuous operation. Equipped with advanced control panels, these units ensure precise monitoring and efficient performance for various industrial power supply requirements.

Key Metrics

Rated Power Output

15 kW

Rated Output

Design & Construction

Enclosure Color	Orange
Cooling System	Yes

Features

Operational Features	Integrated Cooling, Control Panel Monitoring, Robust Construction
