

Gas Spring for Industrial Machinery

This gas spring provides controlled motion and support. It features a pressurized cylinder with a piston and rod.

Product Overview

Precision Motion Control

This industrial-grade gas spring, also referred to as a gas strut or damper, is engineered to provide reliable, controlled motion and support for automated machinery. Designed with a pressurized cylinder, piston, and rod assembly, it ensures smooth operation and consistent force application. The unit includes secure end fittings for installation and is clearly labeled with essential safety and handling instructions to ensure proper maintenance and safe disposal.

Technical Specifications

Part Number	PN40001471
Component Type	Gas Spring / Gas Damper

Safety & Handling

Safety Instructions

- Do not break
- Wear eye protection
- Follow proper scrapping procedures
- Do not drill

Handling Requirements	Pressurized, Industrial Use Only, Safety Labeled
