

Gas Water Heater Heat Exchanger

This replacement heat exchanger is designed for gas water heaters. Constructed from durable, corrosion-resistant metal, it ensures longevity and optimal thermal transfer.

Product Overview

High-Efficiency Gas Water Heater Heat Exchanger

This replacement heat exchanger is engineered for optimal thermal transfer in gas-powered water heating systems. Featuring a multi-pass design with durable coiled tubing, it maximizes surface area to ensure efficient heat extraction from combustion gases. Built with corrosion-resistant materials, this component provides a reliable and consistent hot water supply while minimizing energy consumption.

Technical Specifications

Capacity Range

Material	Capacity Range
Aluminum	1.6L - 10L
Copper	1.6L - 20L

Key Design Features

- Corrosion-resistant construction
- Multi-pass thermal design
- Threaded inlet/outlet connections
- Coiled tube configuration

Material Composition	Aluminum, Copper
----------------------	------------------

Weight Customization	Yes
