

Gasoline Engine 160cc 5.5HP

This gasoline engine has a displacement of 160cc and a power output of 5.5 horsepower. It is designed for various applications, including small machinery, generators, and water pumps.

Overview

Compact Power Solution

The 160cc gasoline engine is engineered for versatility and reliable performance in a wide range of compact machinery applications. With a robust 5.5 horsepower output, it serves as an ideal power source for equipment such as portable generators, water pumps, and other small-scale industrial tools. Its durable construction ensures consistent operation in demanding environments.

Technical Specifications

Power Output

5.5 HP

Horsepower

Displacement

160 cc

Applications

Suitable Applications

Generators, Water Pumps, Small Machinery, Industrial Equipment

Model Identification

Model Series

GX160 • KT160
