

Gasoline Engine

Single cylinder, 4-stroke, air-cooled gasoline engine with overhead valve (OHV) design provides efficient power and reliable performance. It is ideal for powering various applications such as water pumps, generators, and agricultural equipment.

Overview

Reliable Power Solution

This single-cylinder, 4-stroke, air-cooled gasoline engine features an overhead valve (OHV) design to ensure efficient power delivery and reliable performance. Equipped with a recoil starting system and transistorized magneto ignition (T.M.I), it is built for consistent operation. Its robust design makes it an ideal choice for powering water pumps, generators, and a wide range of agricultural equipment.

Performance Metrics

Rated Power

5.5 HP

Power

Technical Specifications

Engine Type	Single cylinder, 4-stroke, air-cooled
Valve Design	Overhead Valve (OHV)
Ignition System	Transistorized Magneto Ignition (T.M.I)
Starting Method	Recoil Start

Applications

Typical Applications	Water Pumps, Generators, Agricultural Equipment, Packaging Machinery
