

Gasoline Engine Air Compressor

This portable air compressor is powered by a gasoline engine and features a twin-cylinder compressor pump. The unit includes a steel air receiver tank and is mounted on wheels for portability.

Product Overview

High-Performance Portable Air Compression

This energy-saving, air-cooled portable air compressor is designed for flexibility and efficiency in demanding work environments. Engineered with a robust gasoline engine, it offers reliable power for applications like car maintenance where electrical access may be limited. The unit features a compact, two-stage twin-cylinder design that ensures smooth operation, low fuel consumption, and extended service life.

Technical Specifications

Rated Displacement

0.3 m³/min

Minimum Displacement

3 m³/min

Maximum Displacement

Exhaust Pressure Rating

0.8 MPa

Power Source

Gasoline Engine, Diesel Engine, Motor

Design & Construction

Key Design Features

- Air-cooled system
- Two-stage, twin-cylinder compressor pump
- Integrated intercooler
- Portable wheel-mounted design
- Horizontal air receiver tank

Safety Equipment

Safety Valve • Pressure Gauge • Drain Valve
