

Gasoline Engine Air Compressor

This portable air compressor is equipped with a gasoline engine and a twin cylinder pump, suitable for industrial and construction environments. It provides compressed air to power pneumatic tools and equipment, ensuring efficient operation.

Overview

Industrial-Grade Performance

This portable air compressor is engineered for demanding industrial and construction environments. Powered by a reliable gasoline engine, the unit features a robust twin-cylinder pump mounted on a horizontal air tank for maximum stability and efficiency. It is fully equipped with essential safety controls, including a pressure regulator, safety valve, and drain valve to ensure consistent, safe operation for all your pneumatic tools.

Technical Specifications

Engine Model	168F
Engine Power	5.5 HP
Pump Configuration	Twin Cylinder

Features

Design

Portable • Horizontal Tank

Safety & Control

Pressure Regulator, Safety Valve, Drain Valve
