

Gasoline Engine EM200-B for Power Generation

The EM200-B is a gasoline engine designed for power generation and industrial use. It is built with robust construction ensuring durability and reliable performance.

Overview

High-Performance Gasoline Engine

The EM200-B is a versatile gasoline engine engineered for power generation and industrial applications. Featuring a robust 4-stroke, single-cylinder design, it provides reliable performance for equipment such as generators and water pumps. With efficient fuel consumption and dual recoil/electric starting systems, this engine is built for durability and ease of use in demanding environments.

Technical Specifications

Engine Configuration	Single Cylinder, OHV, 4-Stroke, Air Cooled
Displacement	196 cc
Bore x Stroke	68 x 54 mm

Performance Metrics

Maximum Output

4 kW Max Output	3600 r/min Rated Speed
---------------------------	----------------------------------

Capacity & Fuel

Fuel Type	Unleaded gasoline
Fuel Tank Capacity	3.6 L
Engine Oil Capacity	0.55 L

Operation

Starting System

Recoil Start • Electric Start
