

Gasoline Engine for Power Generation

This gasoline engine is designed for power generation applications. It features a compact design and durable construction, engineered for reliable performance.

Overview

Reliable Power Generation Engine

This gasoline engine is specifically engineered for power generation applications, offering a balance of compact design and robust construction. Designed for versatility, it serves as a reliable power source for generators, water pumps, and various portable equipment. Its user-friendly features, including an integrated fuel tank, efficient air filtration, and a recoil starter, ensure consistent performance and ease of operation in demanding environments.

Technical Specifications

Power Rating

5 HP
Horsepower

Model ID	EY20
Engine Type	Gasoline Engine

Features

Key Features

- Compact design for easy integration
- Durable construction for long service life
- Recoil starter for quick ignition
- Integrated air filtration system

Applications

Suitable Applications	Power Generators, Water Pumps, Portable Equipment
-----------------------	---
