

Gasoline Engine Fuel Filter

This fuel filter is designed for gasoline vehicles, removing contaminants to ensure clean fuel delivery to the engine. The filter's metallic construction offers durability and resistance to corrosion.

Product Overview

High-Performance Gasoline Fuel Filtration

This cylindrical fuel filter is engineered specifically for gasoline-powered vehicles to ensure optimal engine performance. Its robust metallic housing provides excellent durability and resistance to corrosion, while the integrated design effectively removes contaminants from the fuel supply. Designed to meet or exceed OEM standards, this filter ensures clean fuel delivery and long-term reliability for your vehicle's engine system.

Technical Specifications

Key Benefits

- Removes contaminants from fuel
- Ensures clean fuel delivery
- Durable metallic construction
- Protects fuel system integrity

Construction	Metallic housing
Engine Compatibility	Gasoline engines
Design Features	Cylindrical shape, Corrosion-resistant, OEM compliant, Protective end caps
