

Gasoline Engine Powered Sprayer Unit

This gasoline engine-powered sprayer unit is commonly used in agricultural and construction settings. It is suitable for applying pesticides, herbicides, fertilizers, and other liquids in large areas.

Overview

Professional Spraying Solution

This gasoline engine-powered sprayer unit is engineered for high-efficiency liquid application in agricultural and construction environments. Featuring a robust engine paired with a high-pressure pump, it ensures consistent performance for tasks ranging from crop protection to site maintenance. The integrated hose reel and durable frame design provide stability and ease of operation, making it a reliable choice for applying pesticides, herbicides, and fertilizers over large areas.

Technical Specifications

Power Source	Gasoline Engine
Key Features	High-Pressure Pump, Integrated Hose Reel, Sturdy Frame, Portable Design

Applications

Common Applications

- Agricultural pesticide application
- Herbicide spraying
- Fertilizer distribution
- Construction site liquid application

Included Components

Included Accessories

- High-pressure hoses
- Spray nozzles
- Fittings and connectors
