

Gasoline Engine Water Pump

This gasoline engine water pump is designed for industrial and agricultural applications. Its technical specifications include flow rate, head, and suction lift, making it suitable for various water-related tasks.

Model	Pipe Dia (mm)	Max Head (m)	Max Flow (L/min)	Power (Hp)	Weight (Kg)
SLG50	50x50	28	600	5.5	24
SLG80	80x80	27	1000	6.5	27
SLG100	100x100	27	1600	8.0	44

Product Overview

Industrial Gasoline Engine Water Pump

This series of high-performance water pumps is designed for versatile industrial and agricultural applications. Powered by reliable gasoline engines, these units feature a robust air-cooled, open-frame construction with durable aluminum alloy pump bodies and impellers. They are engineered to provide efficient water transfer for tasks such as irrigation and dewatering, ensuring stability and long-term operational reliability.

Construction & Design

Electrical Standards

Insulation Class B/F • Protection Class IP44/IP54

Construction Materials

Aluminum Alloy Body, Aluminum Alloy Impeller, Open Frame Design

Performance Metrics

Performance Highlights (GLD-80 Model)

6.5 HP

Power Output

36 m3/h

Max Capacity

30 M

Total Head

7 M

Suction Head

Fuel Specifications

Gasoline, 3.6 L Capacity
