

Gasoline Engine Water Pump for Irrigation

This compact water pump is designed for agricultural and engineering use. It features a gasoline engine, durable construction, and a sturdy frame for stability during irrigation, drainage, and water transfer.

Product Overview

High-Performance Gasoline Water Pump

This gasoline-powered water pump is engineered for demanding agricultural and engineering environments. Its compact and portable design ensures reliable operation in remote locations where power access is limited. Built with durable materials and mounted on a stable frame, this unit is an ideal solution for efficient irrigation, drainage, and water transfer tasks.

Technical Specifications

Power Source	Gasoline Engine
Primary Applications	Irrigation, Drainage, Water Transfer, Agricultural Engineering

Design & Build

Key Design Features

- Compact and portable form factor
- Sturdy mounting frame for stability
- Durable construction for long-term use

Build Quality

Heavy-Duty • Portable
