

Gasoline Engine Water Pump for Irrigation

Gasoline engine driven water pump designed for irrigation and drainage applications. Features a robust frame for protection and portability.

Product Overview

Reliable Irrigation Performance

This gasoline engine-driven water pump is engineered for efficient irrigation and drainage applications in agricultural and construction environments. Built with a robust frame for enhanced portability and protection, the unit provides consistent fluid transfer capabilities. Its compact design and reliable engine make it a versatile tool for professionals needing mobile water management solutions.

Performance Metrics

Operational Performance

8 m3/h

Rated Flow

21 m

Total Lift

6 m

Suction Depth

3600 rpm

Rotation Speed

Technical Specifications

Connection Ports

Connection Type	Diameter
Inlet Diameter	1 inch
Outlet Diameter	1 inch

Engine Configuration: 154F

Fuel Tank Capacity: 1.5 L

Physical Dimensions

Net Weight: 13 kg

Package Dimensions: 440 x 340 x 395 mm

Certifications

Standards & Compliance

CE • TÜV SUD • EPA • CARB
