

Gasoline Engine Welding Generator

This is a portable combination unit with both gasoline-powered generator and welding capabilities. Features include a gasoline engine, welding current adjustment, and a digital display for monitoring performance.

Product Overview

Versatile Power and Welding Solution

This gasoline-powered unit combines a reliable generator with a functional welding machine, making it an essential tool for remote worksites and maintenance tasks. Designed for portability and ease of use, it features integrated controls for welding current adjustment and clear monitoring via a digital display. The rugged construction ensures it can handle demanding field conditions while providing consistent power output.

Technical Specifications

Welding Output

Positive Terminal (+) • Negative Terminal (-)

Power Source

Gasoline

Key Features

Welding Current Adjustment, Work Indicator, Circuit Breaker Protection, Digital Performance Display

Operational Controls

Control Panel Components

- Welding Current Setting Dial
- Work Indicator Light
- Circuit Breaker Switch
- Output Accessory Port
- Digital Display
