

Gasoline Engine YH188

The YH188 is a gasoline engine engineered for diverse applications. It features a forced air cooling system, recoil starter, and large fuel tank.

Overview

Industrial Powerhouse

The YH188 is a powerful and reliable gasoline engine engineered for demanding industrial and agricultural applications. Featuring durable construction and an efficient combustion system, it ensures long-term operational longevity. Its design prioritizes ease of maintenance, minimizing downtime for critical equipment such as generators, water pumps, and tillers.

Performance

Rated Power Output

7 HP

Power Output

Technical Details

Cooling System	Forced Air Cooling
Starting Method	Recoil Starter

Key Features

Maintenance Benefits

- Durable construction
- Efficient combustion
- High serviceability
- Large fuel tank for extended operation

Common Applications	Generators, Water Pumps, Tillers, Industrial Equipment, Agricultural Equipment
