

Gasoline Generator

Gasoline generators provide portable power for various applications. These generators are powered by gasoline and convert it into electricity.

Overview

Professional Breathing Protection

This self-contained breathing apparatus is a critical safety solution designed for hazardous environments. It ensures a consistent supply of breathable air, protecting users from harmful gases, fumes, and oxygen-deficient atmospheres. Engineered for comfort and reliability, it features an ergonomic harness and a high-performance full-face mask suitable for industrial and emergency operations.

Technical Specifications

Operating Pressure

30 MPA

Pressure

System Components

- High-pressure air cylinder
- Pressure regulator
- Full-face mask
- Ergonomic harness

Applications

Typical Applications

Firefighting, Industrial Operations, Emergency Response
