

# Gasoline-Powered Plate Compactor

This plate compactor is designed for soil compaction in construction and landscaping. Powered by a gasoline engine, it delivers high-frequency vibrations to efficiently compact granular materials, asphalt, and other surfaces.

## Product Overview

### Professional Soil Compaction

This gasoline-powered plate compactor is engineered for efficient soil compaction in construction and landscaping projects. It utilizes high-frequency vibrations to effectively compact granular materials, asphalt, and foundation surfaces. Designed for versatility, it includes a durable steel base plate and an integrated water tank for dust suppression during asphalt work.

## Design & Features

### Key Features

Gasoline Powered, Foldable Handle, Steel Base Plate, Integrated Water Tank, High-Frequency Vibration

## Applications

### Best For

- Road construction
- Trench filling
- Foundation preparation
- Landscaping
- Asphalt compaction
