Product Overview

Versatile Soil Cultivation

This gasoline-powered rotary tiller is engineered for efficient soil preparation and cultivation in various agricultural settings. Featuring a robust engine and a specialized gearbox with high and low speed settings, it offers precise control for different farming operations. Its compact, durable design ensures reliable performance, making it an ideal choice for small to medium-sized gardens and farms.

Technical Specifications

Engine Model	170F
Transmission Mode	Triangle Belt
Main Clutch Type	Grip clutch
Wheel Size	400-8

Operational Features

Gearbox Performance

- High and low speed settings
- Variable speed control
- Compatible with multiple tool attachments
