

Gasoline Powered Semi-Trash Water Pump

This gasoline semi-trash pump is designed for handling water with solids and debris. It features a powerful gasoline engine for reliable performance in remote locations.

Product Overview

High-Performance Semi-Trash Pump

This gasoline-powered semi-trash pump is engineered to handle water containing solids and debris, making it a robust solution for demanding environments. Equipped with a reliable gasoline engine, it offers consistent performance in remote locations where power access is limited. Its durable construction ensures longevity and resilience, serving as an essential tool for construction sites, agricultural irrigation, and emergency flood control.

Key Features

Handling Capability

Water with Solids • Debris Handling • Heavy Duty

Ideal Applications

Construction Sites, Agricultural Irrigation, Flood Control, Remote Operations

Technical Specifications

Power Source

Gasoline Engine

Build Quality

Industrial Grade
