

Gasoline Powered Water Pump

This gasoline-powered water pump is designed for efficient water transfer. It features a durable frame for protection and portability, and a reliable gasoline engine for powerful pumping action.

Product Overview

High-Performance Gasoline Water Pump

This gasoline-powered water pump is engineered for efficient and reliable water transfer across various professional applications. Featuring a robust, durable frame, it offers excellent protection and portability for use in irrigation, construction sites, and emergency water removal. Designed for demanding environments, this pump delivers consistent performance to keep your operations running smoothly.

Technical Specifications

Key Features

- Durable protective frame
- Portable design
- Reliable gasoline engine
- Robust construction for longevity

Engine Type	Gasoline
Suitable Applications	Irrigation, Construction, Water Transfer, Water Removal
