

# Gasoline Powered Water Pump

This gasoline-powered iron water pump is designed for efficient water transfer. Its robust iron construction ensures durability and reliable performance for pumping water in remote locations.

## ADDITIONAL IMAGES

## Overview

### Robust Water Transfer Solution

This gasoline-powered iron water pump is engineered for efficient water transfer across demanding environments. Featuring a durable four-stroke engine and robust iron construction, it provides a reliable, portable power source for irrigation, construction sites, and emergency water removal. Designed for ease of maintenance and consistent performance, this unit is an ideal choice for remote locations without access to electricity.

## Technical Specifications

### Performance Overview

**4 cycle**

Engine Stroke

Engine Type	Four-stroke gasoline engine
Construction Material	Iron
Starting Mechanism	Recoil starter

## Key Features

### Maintenance

Easy Maintenance • Service-Friendly Design

Suitable Applications	Irrigation, Construction Sites, Emergency Water Removal, Remote Locations
