

# Gasoline Powered Water Transfer Pump

This portable water pump is designed for irrigation, drainage, and general water transfer. It features a gasoline-powered engine for independent operation.

## Product Overview

### Reliable Water Transfer Anywhere

This portable gasoline-powered water transfer pump is engineered for high-performance irrigation, drainage, and general water movement tasks. Designed for independent operation, it eliminates the need for electrical grid access, making it ideal for remote sites and demanding environments. The unit is reinforced with a durable metal frame that protects critical internal components while ensuring ease of transport between job sites.

## Technical Specifications

### Design Advantages

- Portable design for easy transport
- Independent gasoline operation
- Protective reinforced metal framing

Engine Type	Gasoline
Construction	Durable Metal Frame
Recommended Applications	Irrigation, Drainage, Water Transfer
