

Gasoline Rammer Compactor

This gasoline-powered rammer compactor is designed for soil compaction in construction and landscaping. It is ideal for compacting cohesive and mixed soils in confined areas.

Overview

High-Performance Compaction Solution

This gasoline-powered rammer compactor is engineered for professional soil compaction in construction and landscaping environments. Featuring a robust engine and a heavy-duty compaction foot, it provides the necessary force for effective soil stabilization. The unit includes a protective frame to ensure durability and ease of handling, making it an ideal choice for compacting cohesive and mixed soils in confined spaces.

Technical Specifications

Key Design Features

- Heavy-duty compaction foot
- Protective frame for durability
- Ergonomic handling design

Power Source	Gasoline
Suitable Applications	Construction, Landscaping, Cohesive Soils, Mixed Soils
