

Gasoline Vibratory Plate Compactor

This vibratory plate compactor is a robust machine designed for soil compaction in construction and landscaping. It delivers optimal performance and durability, featuring a heavy-duty steel base plate and vibration-dampening handle.

Overview

Professional Soil Compaction

The VB-N60 is a robust and efficient vibratory plate compactor engineered for soil compaction in construction and landscaping environments. Featuring a heavy-duty steel base plate and a reliable gasoline engine, it delivers high-performance results for granular soils, asphalt, and paving stones. The design includes a vibration-dampening handle to enhance operator comfort, while its compact footprint allows for excellent maneuverability in confined spaces.

Performance

Compacting Depth	20 cm
Centrifugal Force	10.5 kN
Vibratory Frequency	5000 times/min
Travelling Speed	25 m/min

Technical Specifications

Engine Power

4 hp Min Power	5.5 hp Max Power
--------------------------	----------------------------

Model Number

VB-N60

Base Plate Size	43 x 40 cm
Machine Weight	68 kg
