

Gear Hobbing Machine for Precision Gear Manufacturing

This precision gear hobbing machine is designed for manufacturing gears with high accuracy and efficiency. It features a robust construction that ensures precise gear cutting.

Overview

Precision Gear Hobbing Solution

This precision gear hobbing machine is engineered for high-accuracy and efficient gear manufacturing. Its robust construction provides excellent stability and vibration dampening, ensuring consistent cutting precision. Designed for versatility, it supports the production of spur, helical, and worm gears across various materials and sizes.

Technical Features

Compatible Gear Types	Spur Gears, Helical Gears, Worm Gears
Cooling System	Yes
Control System	Integrated user-friendly control panel

Equipment & Accessories

Standard Equipment

- Work holding fixture
- Hob head
- Integrated coolant system
- Control panel

Performance Highlights

Key Performance Indicators

1 High

Vibration Dampening

1 Precision

Accuracy Level
