

Geared Trolley for I-Beams

This geared trolley is designed for the smooth horizontal movement of heavy loads. The trolley features a geared mechanism allowing for precise positioning along I-beams or compatible tracks.

Product Overview

Precision Material Handling

The GCL 620 Series Geared Trolley is a robust and reliable tool engineered for the smooth, efficient horizontal movement of heavy loads. Featuring a precision-gear mechanism, this trolley allows for exact positioning and controlled travel along I-beams and compatible tracks. Built for demanding industrial environments, it utilizes high-quality wheels to minimize friction and enhance maneuverability, making it an essential solution for safety-critical material handling applications.

Technical Specifications

Key Features

- Geared mechanism for precise positioning
- High-quality low-friction wheels
- Durable construction for heavy loads
- Controlled travel along tracks

Series Model	GCL 620 Series
Application	Material Handling, Industrial, I-Beam Transport
