

General Purpose AC Induction Motor

This general-purpose electric motor is suited for various industrial and mechanical applications. It features a cylindrical housing, a mounting base, and a shaft for power transmission.

Overview

Reliable Industrial Performance

This general-purpose AC induction motor is engineered for consistent, reliable performance in a wide range of industrial and mechanical applications. Featuring a robust cylindrical housing and a secure mounting base, it is designed for stability during continuous operation. The integrated electrical connection box and exposed drive shaft facilitate straightforward installation and power transmission for light to medium-duty tasks.

Technical Specifications

Motor Type	AC Induction Motor
Phase	Single-phase
Application Suitability	Light Duty, Medium Duty, Industrial, Mechanical

Design & Construction

Housing Design	Cylindrical
Mounting Style	Base Mounted
Connection Box	Yes
