

General-Purpose Air-Cooled Engine for Pumps

This general-purpose engine is suitable for various pump and vacuum equipment. It features a compact design, air-cooled operation, and robust construction for reliable performance.

Overview

Reliable Air-Cooled Power

This general-purpose air-cooled engine is engineered for versatility and durability in demanding pump and vacuum equipment applications. Its compact design ensures easy integration into existing systems, while the robust construction guarantees long-term operational reliability. Designed with maintenance in mind, this unit provides a dependable power source for professional industrial environments.

Technical Specifications

Cooling Type

Air-Cooled

Model Designation

YM186FA

Primary Applications

Pump Equipment, Vacuum Equipment, General Industrial
