

General-Purpose Electric Motor

This general-purpose electric motor features a robust construction with cooling fins for heat dissipation. It includes a terminal box for electrical connections and a shaft for power transmission.

Product Overview

Industrial Performance

This general-purpose electric motor is engineered for reliable operation across a wide range of industrial and machinery applications. Featuring a robust, durable construction with integrated cooling fins, it ensures efficient heat dissipation during continuous use. The design includes an accessible terminal box for simplified electrical connections and a precision-engineered shaft for consistent power transmission.

Technical Specifications

Key Components

- Terminal Box
- Power Transmission Shaft
- Heat Dissipation Fins

Motor Type	AC Induction Motor
Cooling System	Air Cooled, Integrated Fins
