

General Purpose Fluid Transfer Pump

This general-purpose pump is designed for transferring fluids. The unit features a gasoline engine coupled to a centrifugal pump within a protective frame, making it suitable for irrigation and dewatering.

Product Overview

Versatile Fluid Transfer Solution

This general-purpose fluid transfer pump is designed for reliable performance in demanding environments. Featuring a robust gasoline-powered engine coupled with a high-efficiency centrifugal pump housing, it offers excellent mobility and power. Housed within a protective black frame, this unit is an ideal choice for irrigation, dewatering, and various industrial or agricultural fluid transfer tasks.

Technical Specifications

Power Source	Gasoline Engine
Pump Type	Centrifugal
Design Features	Portable, Protective Frame, Durable Construction

Applications

Primary Applications

- Agricultural Irrigation
- Dewatering
- General Fluid Transfer
