

General-Purpose Industrial Cylinder

This general-purpose cylinder is suited for various machinery and industrial applications. It features ports and connections for fluid or gas transfer, along with a pulley system for power transmission.

Product Overview

General-Purpose Industrial Cylinder

This general-purpose industrial cylinder is engineered for reliable performance in diverse mechanical systems, including pumps and compressors. Constructed from high-grade metallic materials, such as aluminum or similar alloys, it offers excellent durability and resistance to corrosion. The unit features integrated ports for efficient fluid or gas transfer and includes a robust pulley system for effective power transmission.

Technical Specifications

Material Composition	Metallic alloy (Aluminum or similar)
Corrosion Resistance	Yes
Key Features	Corrosion Resistant, Multi-Port Design, Integrated Pulley System, Industrial Grade

Applications

Typical Applications

- Industrial Pumps
- Compressor Systems
- General Machinery
- Fluid/Gas Transfer Systems
